FAB-FORM MONOPOUR

WHY POUR TWICE?

FAB-FORM MONOPOUR

ECONOMIC
Less concrete
Less labor

STRONG CONCRETE
Helix® micro rebar

FAST INSTALLATION
Monopoured footings

ACCURATE WALL HEIGHT
Monopour Side Supports

ACCURATE WALL ALIGNMENT
Zont® Bracing

DRY BASEMENT
Fastfoot® membrane

STRONG FOUNDATION
No cold joint

The monopour system uses the ICF block itself to form the footing. Drill adjustable MP Side Supports hold the ICF wall above the ground at the exact footing height. Fastfoot®, attached to the bottom of the ICF, automatically forms the footing.

The system eliminates all footing lumber, labor to install, pour, screed, and strip footings. No cold joint and no headaches of interfacing ICF to pre-poured footing.

Fab-Form Monopour is the most efficient and cost effective method of forming foundations.
