

BUILD HEALTHY FROM THE GROUND UP

FASTFOOT® - the only foundation form providing complete moisture protection

Fab-Form Industries, a world leader in fabric forming, is setting higher standards in sustainable building. Fastfoot®, the fabric footing form, is good for the environment, the health of your home and your family.

PROTECTION

The Fastfoot® membrane protects your home against ground moisture, rising damp, and potential structural damage.

HEALTH

Breathe easier, Fastfoot® prevents mold, mildew, harmful allergens and respiratory ailments such as asthma. Children and seniors are most vulnerable.

BETTER VALUE

Fastfoot is 30% less expensive than lumber. But the real value is the living comfort of a dry and healthy home, increasing the resale price of home.

Fastfoot®, the patented footing form and stay-in-place membrane prevents rising damp & improves indoor air quality.

GREEN & SUSTAINABLE

Fastfoot® conserves our forests and eliminates construction waste to landfills.

SAFE-GUARD ECOSYSTEMS

Fastfoot® protects sensitive eco-systems under your home from cement toxins.

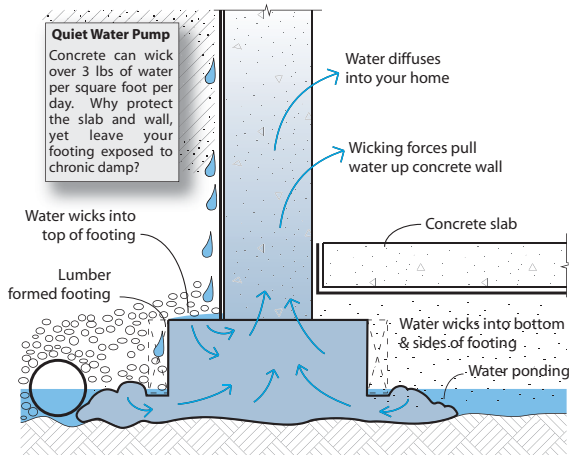

LIABILITY INSURANCE

Damage due to mold is not covered by insurance or warranty programs. The best insurance is prevention with Fastfoot®.

LEED ACCREDITED

Fastfoot® provides LEED® points to your project.

Note to Architects & Specifiers: We offer lunch time seminars.

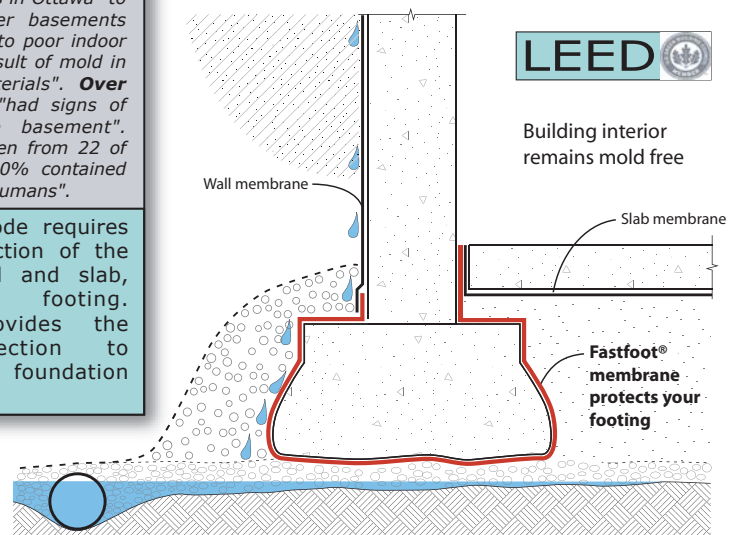

Lumber formed footings: Concrete is poured directly on the ground. Ground moisture wicks up through the footing and into your home. Visit www.damp-alert.org for information on moisture movement in concrete.

CMHC
Canada Mortgage and Housing Corporation

CMHC conducted a survey of 405 finished basements in Ottawa "to determine whether basements were contributing to poor indoor air quality as a result of mold in the finishing materials". **Over 50%** of houses "had signs of moisture in the basement". Samples were taken from 22 of these and over 80% contained mold "harmful to humans".

The building code requires moisture protection of the foundation wall and slab, ignoring the footing. Fastfoot® provides the critical protection to complete the foundation envelope.

Permeance: .063 perms (ASTM E96B)
Tensile (warp) 172 lbs (ASTM D1682)

Fastfoot®: Your foundation stays dry. Your home is permanently protected against ground moisture, mold and mildew.
